

Factory Galvanized Safety Steel Catwalk Platform Scaffolding Plank with Hook

Our Product Introduction

for more products please visit us on bythaiscaffold.com

Basic Information

- Place of Origin: China
- Brand Name: Bythai
- Model Number: BM205
- Minimum Order Quantity: 1000
- Price: 4.5-8.5
- Packaging Details: In bundles
- Delivery Time: 10-15
- Payment Terms: container, shipping, L/C, T/T

Product Specification

- Usage: Scaffolding
- Length: Customized
- Surface: Pre-galvanized/hot Dip Galvanized/Spray Plastic
- Packaging: Container
- Material: Steel
- Place Of Shipment: China
- Highlight: **Factory Scaffolding Plank, Hook Scaffolding Plank**

Product Description:

One of the key features of our scaffolding planks is the variety of surface treatments available. Customers can choose from pre-galvanized, hot dip galvanized, or spray plastic finishes, each offering different levels of protection against corrosion and wear. The pre-galvanized option is a cost-effective solution that provides a layer of zinc coating to protect against rust. The hot dip galvanized finish offers a thicker coating, making it ideal for more demanding environments where superior corrosion resistance is required. For those seeking an alternative, the spray plastic finish can provide additional protection against chemical exposure and extreme weather conditions, while also offering a non-slip surface for added safety.

The design and manufacturing process of our scaffolding steel plank includes a piercing method, known as pierced steel planking, which creates a series of holes or grips in the metal. This perforation technique not only enhances the grip for users, reducing the risk of slips and falls but also contributes to the reduction of the plank's weight without compromising its strength. The holes also allow for easy drainage of water, ensuring that the planks remain slip-resistant even in wet conditions.

To accommodate the diverse requirements of our clients, we offer these steel planks in a range of lengths, with the option for customization to specific measurements. This flexibility ensures that our planks can be seamlessly incorporated into existing scaffolding structures or adapted for bespoke constructions. Regardless of the length, all planks are rigorously tested to meet safety standards and are designed to withstand the rigors of construction sites.

For convenient transportation and storage, we pack our scaffolding planks in containers, which not only facilitates easy handling and shipping but also protects the planks during transit. This packaging ensures that the planks arrive at their destination in pristine condition, ready for immediate use.

The place of shipment for our Scaffolding Plank product is China, which is home to a robust manufacturing infrastructure capable of producing high-quality scaffolding components. The strategic location of our facilities in China allows for efficient distribution and delivery to various international markets. Our logistics team works diligently to ensure that all orders are processed and shipped with care, providing our customers with a reliable supply of scaffolding planks to keep their projects moving forward.

In summary, our Scaffolding Plank product offers unmatched versatility, safety, and durability for any scaffolding application. With customizable lengths, various surface treatments, and the strength of pierced steel planking, it stands as an essential component for construction professionals. Packaged securely and shipped from China, these scaffolding steel planks are ready to support your construction needs and enhance the safety and efficiency of your work environment.

Technical Parameters:

Attribute	Details
Usage	Scaffolding
Material	Steel
Surface	Pre-galvanized/Hot Dip Galvanized/Spray Plastic
Length	Customized
Packaging	Container
Place of Shipment	China
