

Galvanized Steel Scaffolding Planks with Hooks, Guangzhou Manufacturer Galvanized Metal Construction

Our Product Introduction

for more products please visit us on bythaiscaffold.com

Basic Information

- Place of Origin: China
- Brand Name: Bythai
- Model Number: BM205
- Minimum Order Quantity: 1000
- Price: 4.5-8.5
- Packaging Details: In bundles
- Delivery Time: 10-15
- Payment Terms: container, shipping, L/C, T/T

Product Specification

- Place Of Shipment: China
- Material: Steel
- Usage: Scaffolding
- Packaging: Container
- Surface: Pre-galvanized/hot Dip Galvanized/Spray Plastic
- Length: Customized
- Highlight: **Galvanized Scaffolding plank,
Metal Construction Scaffolding plank,
Hooks Scaffolding plank**

Product Description:

The Scaffolding Plank, a fundamental component in the construction and maintenance industries, is designed to offer a robust and safe working platform for various scaffolding systems. This versatile product is shipped directly from China, ensuring access to a product manufactured with precision and care, and making it readily available for international customers. The packaging method chosen for this product is container shipping, which not only guarantees the safe and secure transport of the steel planks but also facilitates the handling and storage upon arrival at the destination.

When it comes to the surface treatment of the Scaffolding Plank, there are several options to cater to different environmental conditions and customer preferences. The pre-galvanized surface is ideal for those who seek a balance between cost-effectiveness and corrosion resistance. For environments that demand a higher level of protection against rust and corrosion, the hot dip galvanized option is the best choice, providing a thick, durable coating of zinc. Lastly, the spray plastic surface treatment offers an additional layer of protection against the elements, while also allowing for a range of color options to enhance visibility and aesthetics on the work site.

The length of the Scaffolding Plank is fully customizable, allowing it to be tailored to the unique specifications of each construction project or application. This level of customization ensures that the planks can fit a variety of scaffolding frames and spaces, providing a seamless and safe integration into the existing structure. The customization options extend beyond mere utility, enabling the steel plank to contribute to a more efficient and streamlined construction process.

Manufactured from high-quality steel, the Scaffolding Plank is engineered to withstand the rigors of heavy use in construction sites. The strength of the steel material ensures that the planks are capable of supporting the weight of workers, tools, and materials, while also resisting bending and deformation under load. This durability makes the steel Scaffolding Plank a reliable choice for long-term use in a variety of climates and conditions.

Among the various types of steel planks available, the steel plank ringlock system is especially popular. It is designed to seamlessly integrate with the ringlock scaffolding, a widely used system known for its strength, versatility, and ease of assembly. The steel plank with hooks is another variant that provides a secure attachment to the scaffolding, ensuring that the planks stay in place even under the movement of workers and equipment. This feature is particularly important for maintaining a safe working environment.

The steel catwalk scaffold option extends the functionality of the Scaffolding Plank, transforming it into a stable and spacious work area. This design is ideal for tasks that require a larger platform, offering workers the space they need to move freely and work efficiently. The enhanced stability and space of the catwalk scaffold make it a preferred choice for many construction and maintenance tasks.

Finally, the steel plank 230 model refers to a specific size within the range of steel planks, denoting its width in millimeters. This size is often sought after for its balance between providing a sufficient working surface and maintaining a lightweight design for easy handling and installation. The steel plank 230 is a testament to the versatility and adaptability of the steel Scaffolding Plank product line, catering to a wide array of customer needs and preferences.

Technical Parameters:

Attribute	Detail
Material	Steel
Length	Customized
Usage	Scaffolding
Place of Shipment	China
Packaging	Container
Surface	Pre-galvanized/Hot Dip Galvanized/Spray Plastic
Product Keywords	Steel plank with hooks, steel catwalk scaffold, perforated steel plank for sale

Support and Services:

Our Scaffolding Plank product comes with comprehensive technical support and services designed to ensure that you can use our product safely and effectively. The support includes access to our online documentation, which provides detailed instructions on installation, use, and maintenance of the scaffolding planks. Our technical support team is available to answer any questions related to

product specifications, load capacities, and compliance with safety standards.

In the event that you encounter an issue with our Scaffolding Plank product, our dedicated services team is on hand to provide troubleshooting assistance. We strive to understand and resolve any product-related problems quickly, minimizing downtime on your worksite.

We take pride in the quality and reliability of our Scaffolding Plank product, and our technical support and services reflect our commitment to customer satisfaction. Please consult our product documentation or reach out to our support team with any questions or concerns you may have regarding our scaffolding planks.
